Featured graphics, collated by our graphics editor Danny Dorling, are proving very successful. Issue 10's graphic shows the social, economic, and environmental characteristics of world cities. The featured graphic in issue 12 compares the geographies of travelling to work in affluent and poorer households in Tyneside, northeast England. If you have any further ideas for featured graphics, please get in touch.

The last few issues have contained some very interesting commentaries: in

issue 9 Gay Hawkins looks at the politics of single-serve plastic water bottles; in issue 10 Tara Quinn and W Neil Adger look at the energy requirements of an ageing population and the implications for climate change and also how the elderly are affected by extreme weather events; in issue 11 Ben Gallan and Chris Gibson challenge the binary of day/night; in issue 12 Charlie Wilson and Tim Chatterton look at climate change policy, informed by Tim's recent fellowship based at the Department of Energy and Climate Change.

Issue 12 contains a piece entitled Geographers and/in Development, which arose from a session with the same name at the annual conference of the Association of American Geographers in Seattle on 14 April 2011. It reflects the contributions of each of the panellists there.

Theme issues since newsletter issue 1 have been:

- new borders of consumption
- water matters
- space-times of decision making
